

Airstream OEM parts program

It is a top priority within our organization that we carry a comprehensive range of air compressor spares for all our equipment. We understand the urgency of the situation if your equipment fails. Relying on air freighting air compressor parts in from factories abroad represents too long a duration and therefore too great a loss in down time.

This is something which we understand with absolute clarity and in order for us to ensure that your downtime is limited to an absolute minimum, we invest in holding all spare parts that we anticipate may be required in our inventory for each and every machine in our range.

Parallel parts program

Original compressor service components can be expensive and in most cases this is due to overseas manufacturers purchasing from component factories in other countries, adding profit margins, transportation costs and then several additional cost centres add their share before you can make your purchase.

At Airstream Compressors we purchase directly from the component manufacturer and shipment is made in bulk in container loads to allow you to make considerable savings, using our generic parts. Our compressor parallel parts program selects components with the same specifications as original equipment.

3-month warranty included on spares.
